

## Buddy Ohm, real-time monitoring of commercial building utilities.

### A complete and low cost solution

Buddy Ohm is an affordable resource monitoring and risk mitigation solution, for buildings of any size, that simplifies building operations and provides peace of mind by harnessing real-time utility and resource data to improve productivity, savings and sustainability.

# Buddy Ohm

## Resource monitoring simplified.

Buddy Ohm provides insights into real-time utility usage in commercial buildings, presented in a way that you don't have to be a seasoned energy manager to understand and act on.

Building health and performance is always changing. As people come in and out, as new equipment is installed, as the seasons change throughout the year, a building's profile can change dramatically. Monitoring solutions like Buddy Ohm can track performance, spot trends and uncover anomalies that can help reduce waste and improve operational efficiencies.

With detailed building data in hand, it's easier to plan infrastructure upgrades, better schedule systems like HVAC, and create programs to educate and action the people that work and visit the facility to improve overall performance. Ohm also makes it simple to reduce a building's impact by offering a carbon offset service as an option for every installation.

Every building can benefit from monitoring resources like electricity, water, gas, solar, temperature and humidity, so Buddy Ohm is priced so every building can participate. In most cases, non-invasive sensors can be installed at meters, and in critical areas of the building, without disrupting building operations. The sensors transmit utility and environmental data wirelessly to Buddy Ohm, and then via a secure mobile data connection to the Buddy Cloud for processing and visualization in the Ohm Portal, and Ohm Dashboard.

Whether you're looking to get detailed data about building and facility operations, spot issues before they become problems, or creating and measuring sustainability targets for the organization, Buddy Ohm is a great way to get things started.

## Improving Operations

- Get a better view into the health of your building, or portfolio of buildings in real-time
- Buddy Ohm software is easy to use and clarifies typically complex data
- Point-in-time and threshold alerts help address issues as necessary.

## Easy to get started

- Typical installations require no up-front costs, the Buddy Ohm service is billed monthly starting at \$250 for three measuring points
- Non-invasive installation options, and a simple iOS and Android app make system configuration a snap
- Quick-win measurement opportunities for buildings of any size in electricity, water, gas, and environmental conditions.

## Empowering Occupants

- Research shows building management and occupants have the same interest in conservation, they just need data to get started
- Provide easy access to real-time data, set goals and measure progress
- Dashboards can be customized for individual building environments.
